CAR RENTAL REQUEST AUTOMATION
PROJECT DOCUMENTATION

1. Introduction

Project Title: Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows.

Team Members: Y. Sireesha

2. Project Overview

Purpose: The purpose of this project is to automate the car rental request process using ServiceNow. Users can submit car rental requests, provide required trip details, receive approval, and track the request through the ServiceNow platform.

Features: Car rental request through Service Catalog; requested date, pickup location and drop location; car type selection; duration and reason entry; automated approval workflow; automatic catalog task creation; assignment to Transport Team; approval email notification; request/RITM tracking; Business Rule for car unavailability; automatic incident creation.

3. Architecture

User Interface: The user interacts with the ServiceNow Service Catalog to submit the Car Rental Request.

Application / Workflow: ServiceNow Flow Designer manages request approval, approval decision, catalog task creation, Transport Team assignment, and email notification.

Database: ServiceNow tables store request details, Requested Item (RITM), Catalog Task, and Incident records.

Business Rule: The Car Unavailable Request Business Rule handles the carunavailability condition and creates an Incident.

4. Setup Instructions

Prerequisites: ServiceNow Personal Developer Instance / SkillWallet ServiceNow Instance; valid ServiceNow login; access to Service Catalog; Flow Designer access.

Installation / Configuration:

1. Log in to the ServiceNow instance.
2. Create the Car Rental Request catalog item.
3. Create the required variables.
4. Create the Car Rental Req flow.
5. Configure approval and catalog task actions.
6. Configure email notification.
7. Create the Business Rule.
8. Test the complete request process.

5. Folder Structure

ServiceNow Structure:

Service Catalog: Car Rental Request, Catalog Variables.

Flow Designer: Car Rental Req, Approval, Catalog Task, Email Notification.

ServiceNow Tables: Request, Requested Item, Catalog Task, Incident.

Business Rules: Car Unavailable Request.

6. Running the Application

Steps:

1. Log in to the ServiceNow instance.
2. Navigate to Service Catalog.
3. Open Car Rental Request.
4. Enter Requested Date, Pickup Location, Drop Location, Duration, Car Type, and Reason.
5. Submit the request.
6. The request goes through the approval process.

7. After approval, a Catalog Task is created for the Transport Team.
8. An approval email is sent to the requester.

7. API Documentation

API Integration: Not Applicable. The project uses ServiceNow's built-in platform functionality, Service Catalog, Flow Designer, Business Rules, and ServiceNow tables rather than external APIs.

8. Authentication

Authentication and Authorization: The project uses ServiceNow user authentication and access controls. Authorized users can access the ServiceNow platform and perform actions according to their assigned roles and permissions.

9. User Interface

Main Interfaces: Car Rental Request catalog form; Car Type selection; Pickup and Drop Location fields; Requested Date; Duration; Reason; Request/RITM details; Approval information.

Screenshots to Include: Car Rental Request form; Submitted Request / RITM; Flow Designer execution; Approval; Catalog Task; Sent Email; Generated Incident.

10. Testing

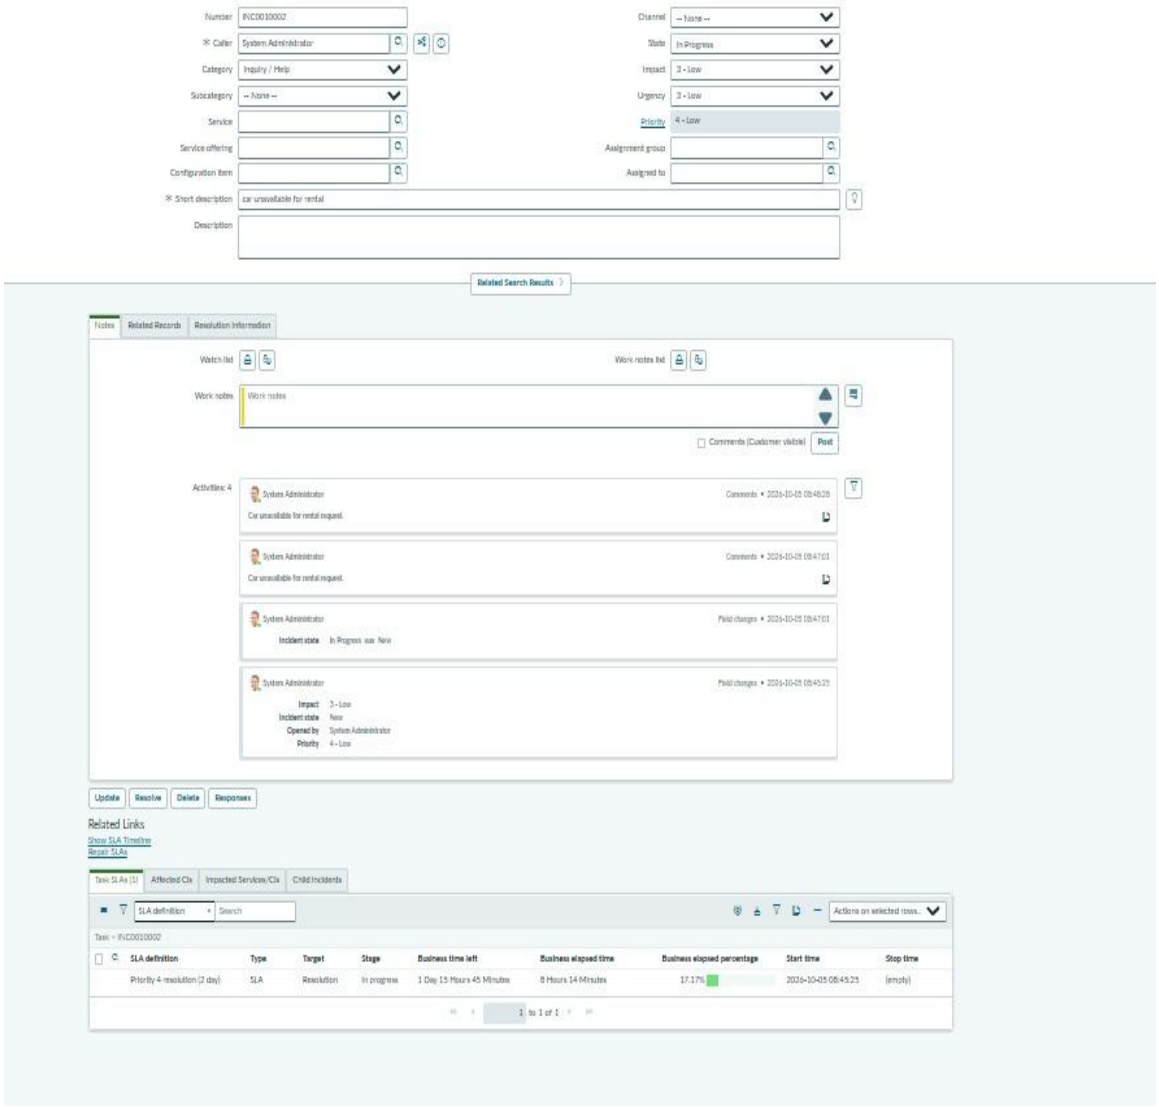

Testing Strategy: The project was tested using the following scenarios.

Test	Result
Car Rental Request submission	Pass
Approval workflow	Pass
Catalog Task creation	Pass

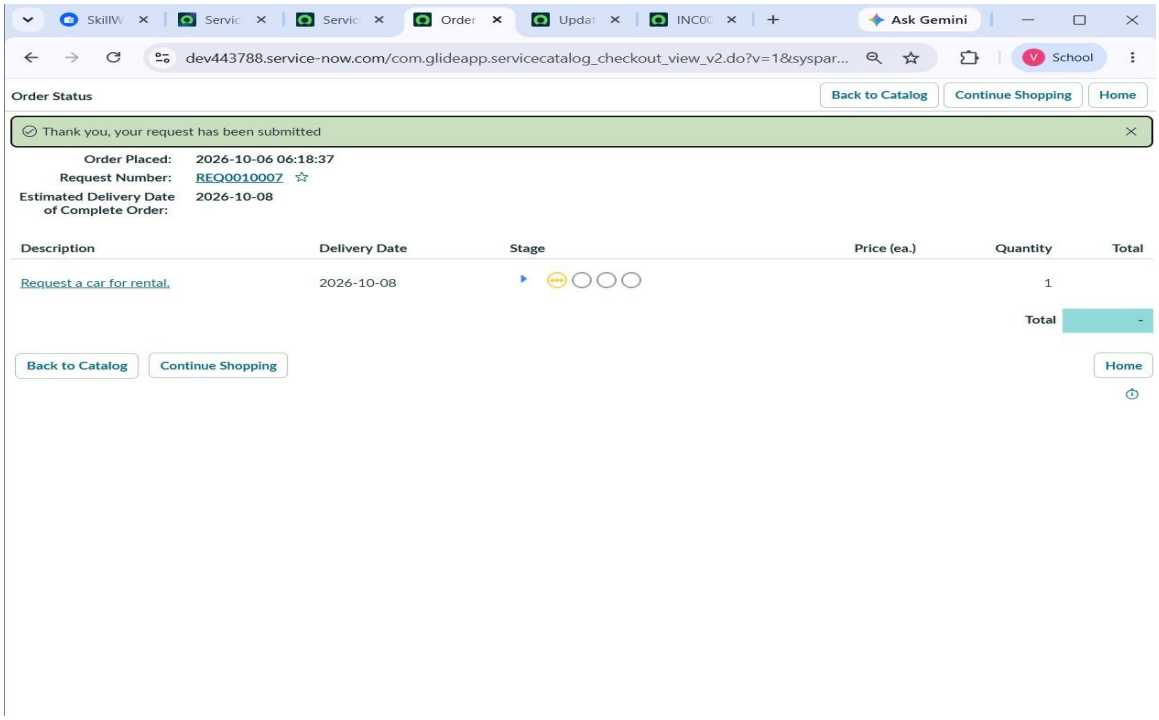

Test	Result
Transport Team assignment	Pass
Approval email	Pass
Business Rule	Pass
Incident creation	Pass
RITM/request tracking	Pass

11. Screenshots or Demo

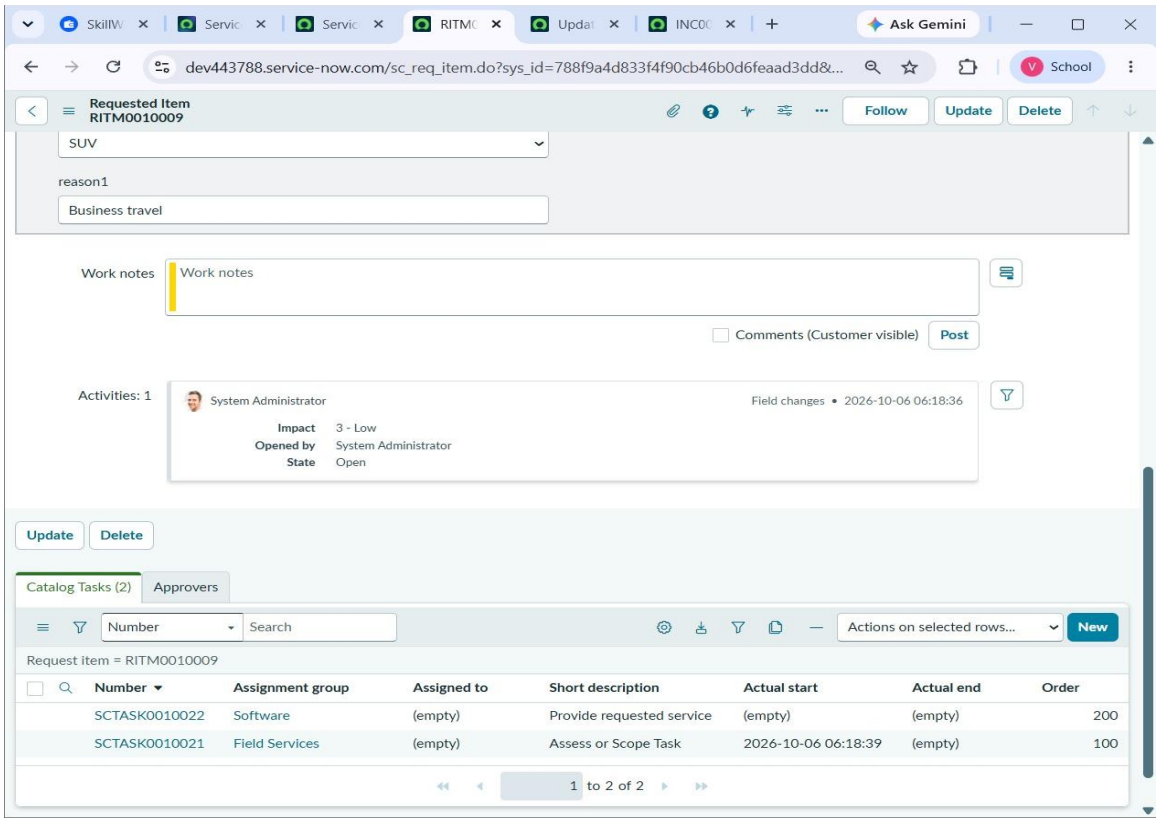

Screenshots: Include screenshots showing Service Catalog – Car Rental Request, Submitted Request, RITM, Flow Designer, Approval, Catalog Task assigned to Transport Team, Sent Email, Business Rule generated Incident, and Order Status.

12. Known Issues

Known Issues: Car availability is handled through the configured Business Rule and Incident creation. External car inventory integration is not currently implemented. The project depends on the availability of the ServiceNow platform.

13. Future Enhancements

Future Enhancements: Add a dedicated Car Inventory table; automatically check real-time car availability; automatically assign an available car; add cancellation functionality; add automatic reminder notifications; add dashboards for rental requests; integrate with external car rental systems; add reports for car usage and rental requests.

Testing Details

Test Case	Expected Result
Submit Car Rental Request	Request is created
Submit required details	Details are captured
Approval	Request proceeds after approval
Approved request	Catalog Task is created
Task assignment	Task assigned to Transport Team
Email notification	Approval email is sent
Car unavailable	Incident is created
Request tracking	RITM can be viewed
