Project Development Phase

Performance Testing – Car Rental Request System

1. Model / System Performance Testing

Project team shall record the following performance-testing information for the Car Rental Request System.

Test ID	Performance Scenario	Metric	Expected Result	Actual Result	Status
PT-01	Homepage/dashboard load	Response time	≤ 3 seconds	_____	
PT-02	Car list retrieval	Response time	≤ 3 seconds	_____	
PT-03	Car search/filter	Response time	≤ 3 seconds	_____	
PT-04	Rental request submission	Response time	≤ 4 seconds	_____	
PT-05	Concurrent user simulation	Successful requests	≥ 95%	_____	
PT-06	Database request handling	Error rate	≤ 2%	_____	
PT-07	Admin request list	Response time	≤ 3 seconds	_____	
PT-08	Session/login handling	Response time	≤ 3 seconds	_____	

2. Test Environment

Application URL: _____
Test Tool: _____
Hardware / Browser: _____
Database: _____
Concurrent Users: _____

3. Performance Observations

Record average response time, peak response time, throughput, error rate, and resource usage where available. Compare actual values against the expected thresholds before declaring the system acceptable.

4. Result & Recommendation

Overall Result: PASS / FAIL / PASS WITH OBSERVATIONS

Recommendations: _____
_____

Note: The expected thresholds above are practical project-demo targets, not production service-level agreements. Replace them with your project/college-approved limits if different.
