User Acceptance Testing (UAT) – Functional Specification & Test Plan

Project Name: Car Rental Request System

Project Description: A web-based system that allows customers to browse available cars, submit rental requests, view request status, and enables administrators to manage vehicles and rental requests.

Project Version: 1.0

Testing Period: _____ to _____

1. Testing Scope

The UAT covers customer registration/login, car search and availability, car details, rental request submission, date and time selection, request status, cancellation where supported, administrator login, vehicle management, rental-request management, validation, and basic error handling.

2. Testing Environment

URL/Location: _____
Browser: Chrome / Edge / Firefox
Database: _____
Credentials: Provided separately if required.

3. User Acceptance Test Cases

TC ID	Test Scenario	Expected Result	Status
UAT-01	Register with valid customer details	Customer account is created successfully.	
UAT-02	Login with valid credentials	Customer is authenticated and dashboard is displayed.	
UAT-03	Login with invalid credentials	Clear validation/error message is displayed.	
UAT-04	View available cars	Available vehicles are listed with relevant details.	
UAT-05	Search/filter cars	Results match the selected search/filter criteria.	
UAT-06	Open car details	Selected car information and rental details are displayed.	
UAT-07	Submit request with valid dates	Rental request is created and confirmation is shown.	
UAT-08	Submit request with missing/invalid data	Request is rejected and validation is shown.	
UAT-09	Check request status	Customer can see the current request status.	
UAT-10	Admin views rental requests	Administrator can view submitted requests.	
UAT-11	Admin updates request status	Updated status is stored and reflected to the customer.	
UAT-12	Admin adds/updates vehicle	Vehicle information is saved and displayed correctly.	
UAT-13	Prevent unavailable vehicle booking	System prevents conflicting/unavailable rental requests.	
UAT-14	Logout	User session is ended and protected pages are inaccessible.	

4. Bug Tracking

Bug ID	Description	Severity	Status	Steps to Reproduce / Remarks
BUG-01	_____	High/Med/Low	Open/Fixed	_____
BUG-02	_____	High/Med/Low	Open/Fixed	_____
BUG-03	_____	High/Med/Low	Open/Fixed	_____

5. Sign-off

Tester Name: _____
Date: _____
Tester Signature: _____
Project Manager / Guide: _____
Product Owner: _____

Notes: Test cases should include both positive and negative scenarios. Record severity, status, and reproduction steps for defects. Deployment should proceed only after required UAT approval.
